scikit-learn

Datasets (1)

```
import sklearn as sk
from sklearn import datasets
```

```
iris = datasets.load_iris() digits = datasets.load_digits()
```

Look at

- `iris.data.size`
- `iris.data.shape`

Datasets (2)

```
load_diabetes
load_boston
load_linnerud
load_wine
load_breast_cancer
```

Datasets (3)

- `data` : `n_samples`, `n_features`
- `target` : response variables
- `target_names`
- `DESCR` : try `print()`

Classification

```
from sklearn import svm
clf = svm.SVC(gamma=0.001, C=100.)
clf.fit(digits.data[:-1], digits.target[:-1])
clf.predict(digits.data[-1:])
```

matplotlib

```
import numpy as np
%matplotlib inline # Optional:  Jupyter notebook
from matplotlib import pyplot as plt

x = np.arange(1, 11)
y = 2 * x + 5
plt.title("Matplotlib demo")
plt.xlabel("x axis caption")
plt.ylabel("y axis caption")
plt.plot(x, y)
plt.show()
```

matplotlib

```
import numpy as np
%matplotlib inline # Optional:  Jupyter notebook
from matplotlib import pyplot as plt

x = np.arange(1, 11)
y = 2 * x + 5
plt.title("Matplotlib demo")
plt.xlabel("x axis caption")
plt.ylabel("y axis caption")
plt.plot(x, y, 'dr')
plt.show()
```

```
import numpy as np
import matplotlib.pyplot as plt

x = np.arange(0, 3 * np.pi, 0.1)
y = np.sin(x)
plt.title("sine wave form")
plt.plot(x, y, 'g')
plt.show()
```

```
import numpy as np
import matplotlib.pyplot as plt

x = np.arange(0, 3 * np.pi, 0.1)
y_sin = np.sin(x)
y_cos = np.cos(x)

# Set up a subplot grid that has height 2 and width 1,
# and set the first such subplot as active.
plt.subplot(2, 1, 1)
# Make the first plot
plt.plot(x, y_sin)
plt.title('Sine')
# Set the second subplot as active, and make the second plot.
plt.subplot(2, 1, 2)
plt.plot(x, y_cos)
plt.title('Cosine')

plt.show()
```

```
x = [5,8,10]
y = [12,16,6]

x2 = [6,9,11]
y2 = [6,15,7]
plt.bar(x, y, align = 'center')
plt.bar(x2, y2, color = 'g', align = 'center')
plt.title('Bar graph')
plt.ylabel('Y axis')
plt.xlabel('X axis')

plt.show()
```

matplotlib

https://matplotlib.org/gallery/

seaborn

```
import seaborn as sns

tips = sns.load_dataset("tips") sns.relplot(x="total_bill",
y="tip", data=tips)

plt.show()
```

seaborn

```
sns.relplot(x="total_bill", y="tip",
     hue="smoker", data=tips)
```

seaborn

```
sns.relplot(x="total_bill", y="tip",
     hue="smoker", style="smoker", data=tips);
```

seaborn

```
sns.relplot(x="total_bill", y="tip",
     size="size", sizes=(15, 200), data=tips);
```

seaborn and random walks

```
df = pd.DataFrame(dict(time=np.arange(500),
          value=np.random.randn(500).cumsum()))
g = sns.relplot(x="time", y="value", kind="line", data=df)
g.fig.autofmt_xdate()
```

More random walks

```
df = pd.DataFrame(np.random.randn(500, 2).
     cumsum(axis=0), columns=["x", "y"]) sns.relplot(x="x",
y="y", sort=False,
     kind="line", data=df);
```
