### Jellybooks

### Jellybooks

import pandas as pd
import numpy as np
import scipy
import matplotlib.pyplot as plt

### Dataframe has many constructors. For example,

```
In [5]: pd.DataFrame({ 'A' : 1.,
               'B' : pd.Timestamp('20161209'),
               'C': pd.Series(1,index=list(range(4)),dtype='float32'),
               'D' : np.arrav([3] * 4, dtvpe='int32'),
               'E' : pd.Categorical(["test", "train", "test", "train"]),
               'F' : 'hello' })
Out [5]:
  1 2016-12-09 1 3 test hello
1 1 2016-12-09 1 3 train hello
2 1 2016-12-09 1 3 test hello
3 + 2016 - 12 - 09 + 1 + 3 + train hello
In [6]:
```

### Viewing data

```
In [16]: dates = pd.date range('20161209', periods=4, freq='1w')
In [17]: df = pd.DataFrame(np.random.randn(4,5), index=dates,
                           columns=list('ABCDE'))
In [18]: df.head()
Out[18]:
2016-12-11 -1.303610 -1.235823 0.621914 0.379340 -0.326934
2016-12-18 -1.218197 -1.113826 0.546314 -0.255001 -0.135573
2016-12-25 -0.124625 0.337268 -0.406295 0.587049 -0.904906
2017-01-01 -0.283182 -0.866213 0.051509 0.693037 -0.661055
In [19]:
```

### Basic data exploration

```
In [19]: df.describe()
Out[19]:

In [21]:
```

### Select a range

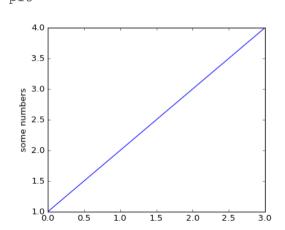

#### Boolean selection criteria

#### Recommended

```
http://www.gregreda.com/2013/10/26/intro-to-pandas-data-structures/
```

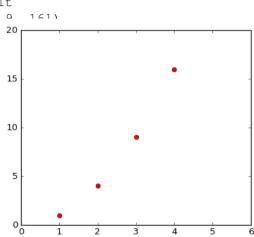

#### Draw a line

```
import matplotlib.pyplot as plt
plt.plot([1,2,3,4])
plt.ylabel('some numbers')
plt.show()
```

#### Draw a line

```
import matplotlib.pyplot as plt
plt.plot([1, 2, 3, 4], [1, 4, a
plt.ylabel('some numbers')
plt.show()
```

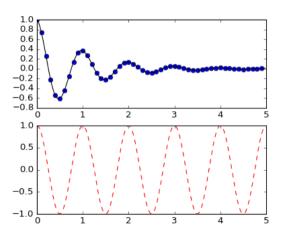

#### Draw a line

```
import numpy as np
import matplotlib.pyplot as plt,20
# evenly sampled time at 200ms intervals
t = np.arange(0., 5., 0.2)
                                 80
# red dashes, blue squares and green triangles
plt.plot(t, t,
                                 60
         'r--', t.
         t**2. 'bs'.
                                 40
         t, t**3, 'q^')
plt.show()
                                 20
```

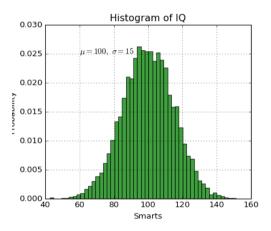

#### Draw two curves

```
import numpy as np
import matplotlib.pyplot as plt
def f(t):
    return np.exp(-t) * np.cos(2*np.pi*t)
t1 = np.arange(0.0, 5.0, 0.1)
t2 = np.arange(0.0, 5.0, 0.02)
plt.figure(1)
plt.subplot(211)
plt.plot(t1, f(t1), 'bo', t2, f(t2), 'k')
plt.subplot(212)
plt.plot(t2, np.cos(2*np.pi*t2), 'r--')
plt.show()

```

#### Draw two curves

```
import numpy as np
import matplotlib.pyplot as plt
mu, sigma = 100, 15
x = mu + sigma * np.random.randn(10000)
n, bins, patches = plt.hist(x, 50, normed=1, facecolor='g', alpha=0.75)
plt.xlabel('Smarts')
plt.vlabel('Probability')
plt.title('Histogram of IQ')
plt.text(60, .025, r'$\mu=100, \ \sigma=15$')
plt.axis([40, 160, 0, 0.03])
plt.grid(True)
plt.show()
```

### Scatter plot

```
http://matplotlib.org/mpl examples/pylab examples/scatter demo2.py
import numpy as np
import matplotlib.pvplot as plt
                                                 Volume and percent change
                                          0.25
fig, ax = plt.subplots()
ax.scatter(delta1[:-1], delta1[1:], c=close, s=volume, alpha=0.5
ax.set xlabel(r'$\Delta i$', fontsize =020)
ax.set_ylabel(r'$\Delta_{i+1}$', fontsize=20)
ax.set_title('Volume and percent cMange')
                                         -0.05
ax.grid(True)
fig.tight_layout()
                                         -0.10
                                           -0.15-0.10-0.05 0.00 0.05 0.10 0.15 0.20 0.25
